Team Details

- a. **Team name: Tech Wolf**
- b. **Team leader name: Aravind Chindi**
- c. **Problem Statement: Digital Wealth Management (Track 1)**

Brief about the idea

Project AURA (Advanced User Risk & Advisory) is a specialized financial co-pilot designed to democratize private wealth management. It bridges the gap between raw transaction data and smart asset growth by transforming passive income into a structured financial roadmap.

The Solution: AURA serves as a **24/7 Digital Wealth Manager** that provides a clear, high-impact **visual landscape** of a user's financial health.

- **Visual Intelligence:** Instead of complex ledgers, AURA utilizes **dynamic interactive graphs** to turn transaction history into a clear path toward asset creation and expense optimization.
- **Predictive Clarity:** It uses advanced simulation to help users see their future financial position before they spend, making wealth management proactive rather than reactive.

The "Dedicated Specialist" Guardrail: To maintain institutional integrity and peak accuracy, AURA is hard-coded with a **Semantic Guardrail Mechanism**.

- **Focus-First AI:** The system is strictly optimized for financial advisory. Any query unrelated to wealth, investments, or budgeting is **automatically rejected**.
- **Safety Filter:** If a user drifts off-topic, the AI instantly redirects them, ensuring the system remains a secure, distraction-free environment dedicated solely to the user's financial discipline.

Opportunities

1. How different is it from existing ideas?

- **From Reactive to Proactive:** Most banking apps act as "Digital Passbooks" (passive history). AURA acts as a **Financial Co-pilot** that predicts future scenarios rather than just recording the past.
- **Visual-First Intelligence:** While standard apps use text-heavy lists, AURA uses **Dynamic Graphic Visualization** to map wealth trajectories, making complex finance accessible to everyone.
- **Semantic Integrity:** Unlike general-purpose AI bots, AURA is a **Specialized Expert**. It includes a built-in guardrail that strictly rejects non-financial queries to maintain absolute focus on user wealth.

2. How will it be able to solve the problem?

- **Eliminating Financial "Leaks":** It solves the problem of idle money by identifying unused funds and unnecessary expenses, then mapping them directly to yield-generating banking products.
- **Scenario Simulation:** By allowing users to input "What-If" scenarios (future income/expenses), it solves the uncertainty of long-term planning through visual forecasting.
- **Bridging the Advisory Gap:** It provides high-end private wealth management features (usually reserved for HNIs) to every retail customer via an intuitive, automated interface.

3. USP (Unique Selling Proposition) of AURA

- **The "Safe-to-Spend" Logic:** A unique algorithm that calculates a real-time spending limit after accounting for all future liabilities and investment goals.
- **Conversational Nudges:** Instead of static alerts, it uses **Context-Aware Nudges** that intervene at the moment of a transaction to prevent goal-drifting.
- **Visual Goal Tracking:** Every investment is linked to a visual graph, allowing users to see their wealth grow in real-time, which significantly increases user engagement and bank product adoption.

List of features offered by the solution

1. Dynamic "Safe-to-Spend" Budgeting

- **The Feature:** Continuously evaluates incoming cash flow against fixed monthly liabilities.
- **The Benefit:** Calculates a real-time spending baseline, preventing overspending before it occurs.

2. Historical Financial Health Mapping

- **The Feature:** Generates interactive Pie, Bar, and Trend charts from past transaction data.
- **The Benefit:** Transforms confusing transaction logs into clear visual insights of user spending behavior.

3. Proactive Wealth & Asset Growth Engine

- **The Feature:** Automatically identifies "Expense Leaks" and suggests shifting funds into yield-generating assets.
- **The Benefit:** Actively transitions the user from passive saving to structured wealth building.

4. Predictive "What-If" Forward Planner

- **The Feature:** Visual simulation of future income and large expenses using forward-looking trend graphs.
- **The Benefit:** Provides an automated cash segregation plan to see the future wealth trajectory before spending.

5. Context-Aware "Smart Nudges"

- **The Feature:** Real-time conversational alerts triggered by the AI Avatar during spending anomalies.
- **The Benefit:** Acts as an empathetic financial coach that intervenes at the moment of transaction to ensure goals are met.

6. Specialized Semantic Guardrail (Security)

- **The Feature:** Advanced intent-classification that filters out any query unrelated to finance or wealth.
- **The Benefit:** Automatically rejects irrelevant requests and directs the user back to specialized wealth advisory.

Architecture diagram of the proposed solution

Technologies to be used in the solution

- **React.js (Frontend UI):** Powers the responsive, single-page User Dashboard and the modular AURA digital advisor interface for a seamless user experience.
- **Python (Backend Logic):** Serves as the core orchestrator for processing complex financial data, handling IDBI Sandbox API integrations, and executing wealth management logic.
- **Google Charts (Data Visualization):** Renders interactive, real-time visual mappings of wealth trajectories, expense pie charts, and predictive "What-If" trends.
- **Nginx (Web Server & Proxy):** Acts as a high-performance reverse proxy to ensure secure, low-latency communication and traffic routing between the frontend and backend services.
- **Docker (Infrastructure & Deployment):** Containerised the entire application environment, ensuring bank-grade security, process isolation, and seamless scalability for sandbox deployment.
- **Gemini LLM (Intelligence Engine):** Drives the generative AI logic for personalized financial strategies, conversational "Smart Nudges," and the strict semantic security guardrail.

Additional Details/Future Development (if any)

1. Account Aggregator (AA) Framework Integration

- **Future Scope:** Transitioning from the IDBI Sandbox data to the open Account Aggregator framework (like Sahamati).
- **Impact:** This will allow AURA to fetch real-time data securely across all of a user's bank accounts, providing a true 360-degree holistic wealth management experience.

2. Direct IDBI Product Cross-Selling Engine

- **Future Scope:** Evolving the "Smart Nudge" engine to feature an automated API link to IDBI Bank's live product suite.
- **Impact:** When AURA detects "expense leaks," it won't just suggest saving—it will directly generate a one-click purchase link for specific IDBI Mutual Funds, FDs, or Insurance products, driving direct revenue for the bank.

3. Gamified Financial Literacy & Rewards

- **Future Scope:** Introducing interactive micro-lessons delivered by the Avatar based on the user's specific spending weaknesses.
- **Impact:** Completing these quick financial health quizzes unlocks IDBI loyalty points or banking perks, turning financial discipline into an engaging, daily habit.
